THE SPORT AND PHYSICAL ACTIVITY SECTOR AND ITS NATIONAL LABOUR MARKET

From 2011 to 2022 - Latest official statistics available for the sector

This part of the fact sheets which gathers 3 distinctive sections presents the main findings from the analysis of the latest official statistics collated at the national level through National Statistics Offices (NSO) and Eurostat. For the purpose of the factsheet, national statistics are provided for the period from 2011 to 2022 to underline tendencies and realities.

It is important to remind that the year 2020 saw a sudden, unexpected and severe pandemic starting in March and the whole society all over the world has been directly impacted by Covid-19 including the sport sector. It was then decided to make a focus on the variation of the sport labour market from 2019 to 2020 and to underline the statistics for 2022 to be able to understand better the recovery situation (when possible with the available statistics).

This fact sheet gathers the latest available statistics for the sport labour market. EOSE ambition is to produce such fact sheet on an annual basis.

RESEARCH METHODOLOGY

Scope: the widest sport and physical activity sector defined by the Council of Europe (2001) as "all forms of physical activity which, through casual or organised participation, aim at expressing or improving physical fitness and mental well-being, forming social relationships or obtaining results in competition at all levels". In this fact sheet we are using the word "sport" having the meaning of the broad sector of "sport and physical activity".

To summarise our statistical definition for the sport labour market, the ambition of the work carried out was to liaise with Eurostat and National Statistics Offices (NSO) to collate all official statistics available on the number of:

- Persons having a sport and fitness occupation (ISCO 342*) in an organisation whose main business is the provision of sport (NACE 93.1*), e.g. professional athletes, coaches (Box I on the summary chart below)
- Persons having a non-sport and fitness occupation (Other ISCO codes) in an organisation whose main business is the provision of sport (NACE 93.1), e.g. managers (Box III on the summary chart below)
- Persons having a sport and fitness occupation (ISCO 342) in an organisation whose main business is not the provision of sport (Other NACE codes), e.q. a fitness instructor working in a hotel (Box II on the summary chart below)
- * ISCO "The international standard classification of occupations". ISCO divides jobs into 10 major groups of occupations and sport specific occupations are listed under ISCO3 Technicians and associate professionals and more precisely under the sub-group ISCO 342 Sport and Fitness Workers (3421 Athletes and Sports Players; 3422 Sports Coaches, Instructors and Officials; 3423 Fitness and Recreation Instructors and Programme Leaders).
- ** NACE "Statistical classification of economic activities in the National Community". NACE is a basically four-digit classification providing the framework for collecting and presenting a large range of reliable and comparable statistical data according to economic activity. The codes under NACE 93.1 (Sport activities) define the organisations whose main business is the provision of sport (93.11 Operation of sports facilities; 93.12 Activities of sport clubs; 93.13 Fitness facilities; 93.19 Other sports activities).

Research methodology used by EOSE for the collection of available statistics for the sport sector can be summarised as follows:

THE OVERALL AMBITION

The overall ambition of EOSE and its networks of members and partners all over Europe is to collate, analyse and publish new knowledge and latest statistics about the National sport labour market on an annual basis.

To make an impact on the overall sector and allow it to unlock its recognised and growing potential to improve peoples' lives and have an impact on health, employment and the economy in Europe, it is necessary to have a precise idea of the size and characteristics of the current labour market, as well as information about its evolutions and tendencies. And this is even more important to get such information now with the overall EU context and following the worldwide unexpected and sudden pandemic which has impacted our sector.

The ambition of this factsheet is to publish latest official statistics about the size and evolution of the sport labour market but also to breakdown these statistics by gender, age, level of education, type of employment (employed or self-employed) and type of working contract (full-time or part time) to get a better understanding of the realities and tendencies.

It is important to underline that the content of this annual factsheet is the best information available and should not necessary be seen as the exact reality of the sector. The ambition of such ongoing work is to publish a maximum of available official statistics at the european and national level to underline main findings and tendencies and to help create policy discussions, concrete impact and potential collaborations through the sector.

Various sources such as Eurostat and National Statistics Offices (NSO) have been used to develop this fact sheet which means methodologies of collection might differ slightly in some cases and statistics should be considered carefully.

The fact sheet is a summary paper so it doesn't gather all available data collected by EOSE about the National sport labour market.

We invite you to visit EOSE website (<u>www.eose.org</u>) if you are willing to consult more detailed information about the sport labour market at both the National and national level. National fact sheets have been developed for each of the 27 EU Member States as well as for the United Kingdom and you can also find a National Research Report gathering all main statistics and providing an analysis of the current situation.
